Doctor Renato Grilli has dedicated mostly of his formation into the oral surgery field, in the Oral Surgery Dep. of San Raffaele Milano, focused on complex case reconstruction following the ideal use of native bone tissue in Implantology.

After , in University of Naples and Chieti, he master the use of piezoelectric device, obtaining various awards researching the ideal application in minimally invasive Implantology.

In Torino he study Periodontal Techniques of tissue preservation, that lead to a new approach, even more minimalist , in Implantology. The tissue plastic surgery becomes a substantial part of his way of working.

Always collaborating with both San Raffaele of Milan University and Federico II of Naples Unoversity, in his studies he try to combine the new trends of Computer Guided Surgery with Soft Tissue Management , to obtain operative protocols that combine the two concepts.

In his practice , during last years, the use of ZYGOMA implants in severe atrophy cases match the concept of using Native Bone Tissue, but he focused on the possibility to improve this protocols with piezoelectric device and a good flaps management, to avoid post operative complications.

Today, in his own clinic, "STUDIO DENTISTICO SPECIALISTICO GRILLI" , a poli functional center of aesthetic medicine and oral health

he holds annual courses in Oral Surgery with particular attention in the management of periimplant complex, in aesthetic cases, trying to convey the concept that both hard and soft native tissue preservation can help the surgeon to achieve a better goal.
